

A Q.I. Guide to Maths for Year 3

Four Operation Methods

Pupils should be taught to:

- add and subtract numbers mentally, including: a three digit number and ones, a three digit number and tens, a three digit number and hundreds.
- add and subtract numbers with up to three digits, using formal written methods of columnar addition and subtraction
- estimate the answer to a calculation and use inverse operations to check answers
- solve problems, including missing number problems, using number facts, place value, and more complex addition and subtraction.

Addition strategies

Use bar model to secure understanding of addition:

Crossing through the hundreds barrier and **bridging** the tens barrier on a **number line** e.g. $75 + 57 = 132$

Counting up to solve **missing number problems** on a number line e.g. $37 + \square = 100$

What is the **difference** between 180 and 230?

Subtraction strategies

Use bar model to secure understanding of subtraction:

Crossing through the hundreds barrier and **bridging** through the tens barrier on a **number line**. $156 - 77 = 79$

Understand how to solve subtraction problems when the two numbers are relatively close together, by counting on (**complementary addition**).

Relate subtraction to finding a difference

e.g. How much less is 180 than 230?

What is the **difference** between 230 and 180?

$230 - \square = 180$

Add a near multiple of 10 (a nearly number) using **rounding and adjusting**.

Expanded horizontal column addition

$$\begin{array}{r} 55 + 23 \\ 50 \ 5 \\ + 20 \ 3 \\ \hline 70 + 8 = 78 \end{array}$$

$$\begin{array}{r} 75 + 67 \\ 70 \ 5 \\ + 60 \ 7 \\ \hline 130 + 12 = 142 \end{array}$$

$$\begin{array}{r} 375 + 67 \\ 300 \ 70 \ 5 \\ + \ 60 \ 7 \\ \hline 300 + 130 + 12 = 442 \end{array}$$

Expanded horizontal column addition

$$\begin{array}{r} 375 + 267 \\ 300 \ 70 \ 5 \\ + 200 \ 60 \ 7 \\ \hline 500 + 130 + 12 = 642 \end{array}$$

Subtract a near multiple of 10 (a nearly number) using **rounding and adjusting**.

$$96 - 39 = 57$$

Expanded column subtraction, including exchanging.

$$\begin{array}{r} 68 - 35 \\ 60 \ 8 \\ - 30 \ 5 \\ \hline 30 + 3 = 33 \end{array}$$

$$81 - 57$$

$$\begin{array}{r} 70 \ 1 \\ 80 \ 1 \\ - 50 \ 7 \\ \hline 20 + 4 = 24 \end{array}$$

$$381 - 157$$

$$\begin{array}{r} 70 \ 1 \\ 300 \ 80 \ 1 \\ - 100 \ 50 \ 7 \\ \hline 200 + 20 + 4 = 224 \end{array}$$

Expanded column subtraction, including exchanging.

$$345 - 163$$

$$\begin{array}{r} 200 \ 1 \\ 300 \ 40 \ 5 \\ - 100 \ 60 \ 3 \\ \hline 100 + 80 + 2 = 182 \end{array}$$

Pupils should be taught to:

- recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables
- write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods
- solve problems, including missing number problems, involving multiplication and division, including integer scaling problems and correspondence problems in which n objects are connected to m objects.

Multiplication strategies

Multiplication as repeated addition

Multiplication as repeated addition using chunking

$13 \times 3 = 39$

Multiplication as repeated addition using chunking

$13 \times 3 = 39$

Multiplication using grid method $13 \times 3 = 39$

x	10	3	
3	30	9	= 39

(Children must be able to multiply by multiples of 10 using factors knowledge: $4 \times 30 = 4 \times 3 \times 10$ e.g. $4 \times 3 = 12 \times 10 = 120$)

Multiplication using grid method 43×5

x	40	3	
5	200	15	= 215

Division strategies

Division as repeated addition (and the inverse- repeated subtraction)

$35 \div 5 = 7$

Division as repeated subtraction. $35 \div 5 = 7$

Division as repeated addition, using chunking

$52 \div 4 = 13$

Division as repeated subtraction, using chunking

$52 \div 4 = 13$
