

Earth Quest

The Case of the Vanishing Honey Bees

Remember learning about Bees?

If you have been outside into the garden or an outside space, you may have noticed bees pollinating the flowers or even dancing!

First watch the video. This video is full of scientific information. You will remember some of the issues that are effecting the bee community and population.

Explore the world of seeds

Start by collecting the seeds from different vegetables and fruits you eat.

Observe, marvel at and identify different types of seeds. You could even store them in the winter and share them with your family and friends.

Create a story garden

Create a miniature world in your garden or outdoor space. You can use containers and garden planters as the 'setting' for your story. You could even grow some easy grow herbs such as lavender or lemon balm add pebbles or other natural materials.

Use small figures such as Sylvanian Families or Lego to create your own imaginative story and let your imagination go wild. Don't forget to draw a picture of your story garden and write the story which you created. Remember you could include a bee or butterfly in your story!

Make a bee or butterfly water station

It is a simple and kind way to show you care for the pollinators – they get thirsty too.

Take photos and send them into the school email – admin@queensinclosure.hants.sch.uk
